

Item No.: LM8660

Standard Group Lock Box for Lockout/Tagout (with 1 Padlock)

This lockable secure box gives you the option to keep keys and other items essential to security safe from unauthorised access. By using multiple padlocks (not included), it is even possible to arrange for multiple person protection. The box itself conforms to the highest standards of quality and can easily be moved thanks to its lightweight construction.

This box is ideal for preventing access to hybrid and electric vehicles in which the high-voltage system has been deactivated. Storing the key and the service/maintenance plug in here means that it is impossible for anyone to reactivate the HV system without authorisation.
